this book stems from the long standing teaching experience of the authors in the courses on numerical methods in engineering and numerical methods for partial differential equations given to undergraduate and graduate students of politecnico di milano italy epfl lausanne switzerland university of bergamo italy and emory university atlanta usa it aims at introducing students to the numerical approximation of partial differential equations pdes one of the difficulties of this subject is to identify the right trade off between theoretical concepts and their actual use in practice with this collection of examples and exercises we try to address this issue by illustrating academic examples which focus on basic concepts of numerical analysis as well as problems derived from practical application which the student is encouraged to formalize in terms of pdes analyze and solve the latter examples are derived from the experience of the authors in research project developed in collaboration with scientists of different fields biology medicine etc and industry we wanted this book to be useful both to

readers more interested in the theoretical aspects and those more concerned with the numerical implementation

the first volume of this series dealt with the basic principles of boundary elements while the second concentrated on time dependent problems and volume three on the computational aspects of the method this volume studies the applications of the method to a wide variety of geomechanics problems most of which are ideally suited for boundary elements demonstrating the potentiality of the technique chapter 1 deals with the application of bem to three dimensional elastodynamics soil structure interaction problems it presents detailed formulations for rigid massless foundations of arbitrary shape both in the frequency and time domains the foundations are assumed to be resting on a linearly elastic homogeneous isotropic half space and be subjected to externally applied loads on obliquely incident body the chapter reviews the major advances in soil foundation interaction presents a series of numerical results and stresses the practical application of bem pointing out the high accuracy and efficiency of the technique even when using coarse mesh discretizations
